

SOLUTION SHEET

Decentralized Clinical Trials

Successful decentralized clinical trials require more than just access to the right technology.

PharPoint's team comes armed with experience, innovation, and processes to successfully support studies with decentralized aspects.

Proactive operational strategy

We have proven processes in place to successfully support decentralized studies. These include a nuanced approach taking into consideration local laws, technological uptake, and population; foundational procedures to mitigate study complexities; and early cross-functional collaboration to reduce and plan around study obstacles.

An innovative, client-centric team

PharPoint's team is focused on ensuring your success, keeping you ahead of study challenges and deadlines. Whether it's through public health crises or recruitment obstacles, our team is here to support your decentralized or virtual study.

Technology-based solutions

We leverage numerous industry-best technologies to support faster, more cost efficient clinical research. This includes use of a comprehensive database to identify investigators with ideal experience, access to patient services that expand study reach, and the utilization of an integrated virtual study platform.
