

## SUCCESS STORY

# A Big Rescue for a Study with the Tiniest of Patients

In this full-service Phase 1 rescue, the PharPoint team took over a neonatal cardiovascular study from an underperforming CRO.

Our experts worked with the Sponsor to address issues with their previous CRO and set clear timelines and budget goals. This took into consideration the complexities involved in enrollment for neonatal patient populations.

PHASE 1

CARDIOVASCULAR

NEONATAL

### SERVICES PROVIDED:

Full-service rescue (including clinical operations, data management, biostatistics and statistical programming)

### ENROLLMENT:

22 patients, aged 1-28 days old, were consented

### DOCUMENTS RECREATED:

PharPoint's team recreated 7+ study plans and an additional 20+ site documents.
